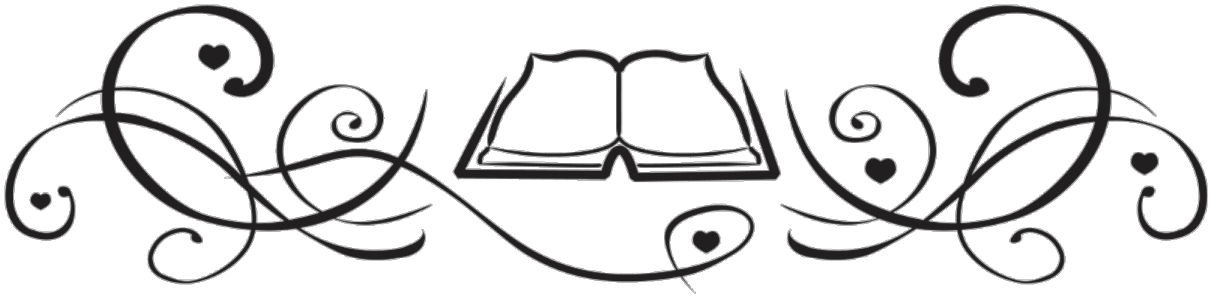
Dashboard Overview

1. Dashboard Overview

The dashboard will come here

User Login and Access



2. User Login and Access

The **Telecom Monitoring System (TMS)** is an internal web-based platform designed for monitoring telecom operations, including traffic, revenue, and Quality of Service (QoS) insights. This system is accessible only within the organizational intranet environment and is intended for authorized personnel.
The platform provides a centralized dashboard to ensure efficient monitoring, reporting, and operational visibility for telecom regulatory and operational activities.

2.1 Access Information

- The system is accessible **only via NOC room intranet**.
- Users must have **authorized credentials** to log in.
- Unauthorized access is strictly prohibited.

2.2 User Registration

Important Notice: User registration is **not self-service**.
For new user account creation, please contact: TMS NOC Room Administrator.

Provide the following details:

- Full Name
- Official Designation
- Department
- Official Email Address
- Contact Number

The administrator will create and provide login credentials after verification.

2.3 Login Instructions

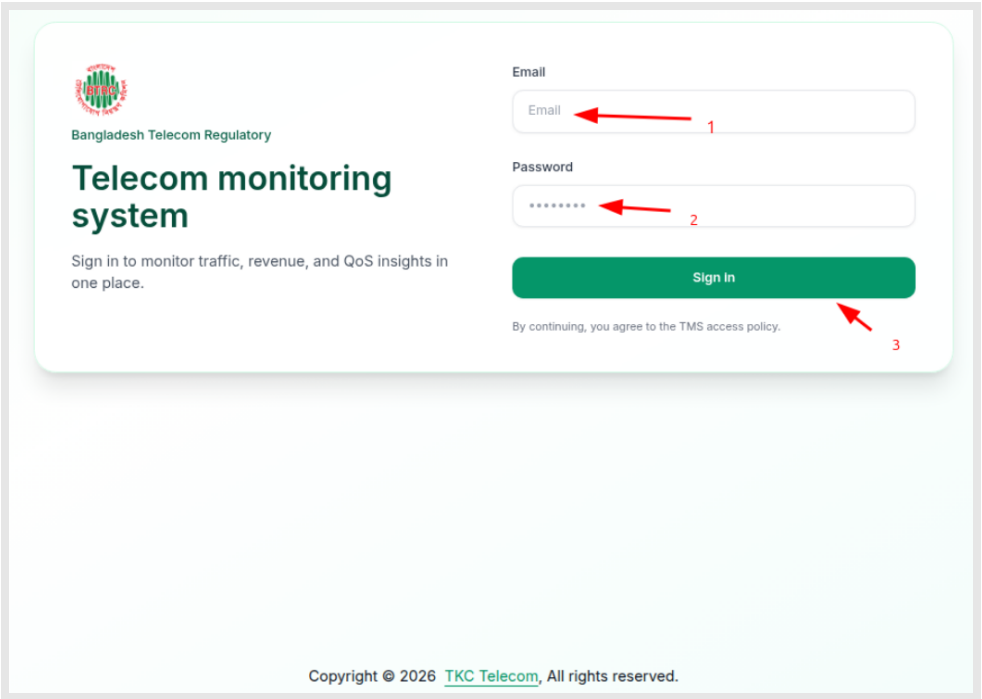


Figure 1: user login

To access the system:

1. **Enter Email:** Input your **registered official email address** in the Email field.
2. **Enter Password:** Enter your **assigned password** securely.
3. **Sign In:** Click on the **"Sign In"** button to access the system dashboard.

2.4 Disclaimer

This system is the property of the organization and is intended strictly for **authorized users only**.

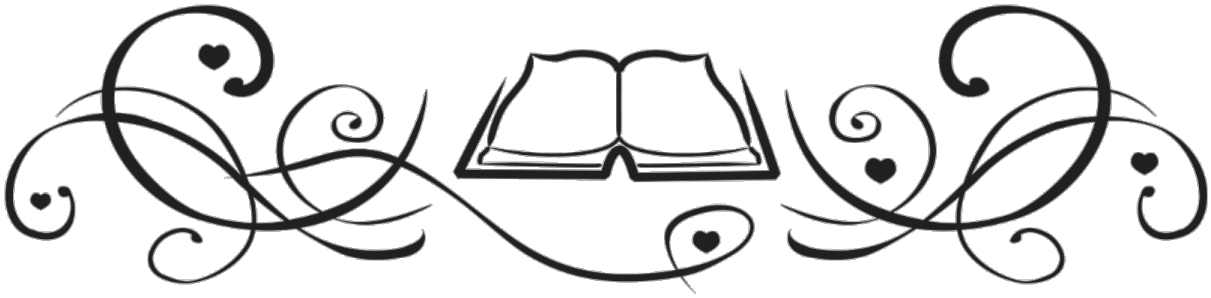
- All activities performed within the system are **monitored and logged**.
- Unauthorized access, misuse, or data manipulation is strictly prohibited and may result in **disciplinary and legal action**.
- Users are responsible for maintaining the confidentiality of their login credentials.
- The organization reserves the right to **restrict or revoke access** at any time without prior notice.

By logging into the system, you acknowledge and agree to comply with all applicable policies, security guidelines, and regulatory requirements.

2.5 Security Guidelines

- Do not share your password with anyone.
- Always log out after completing your session.
- Report suspicious activities immediately to the `TMS NOC Team`.
- Use strong passwords and update them periodically.

Website Operations and Management



3. Website Operations and Management

This section provides an overview of the website in the classic view mode. The classic view provides a user-friendly interface for navigating and managing various aspects of the website.

3.1 Overview of Classic View

The classic view of the website consists of several sections, each represented by specific UI elements. Below are the key sections and their functionality:

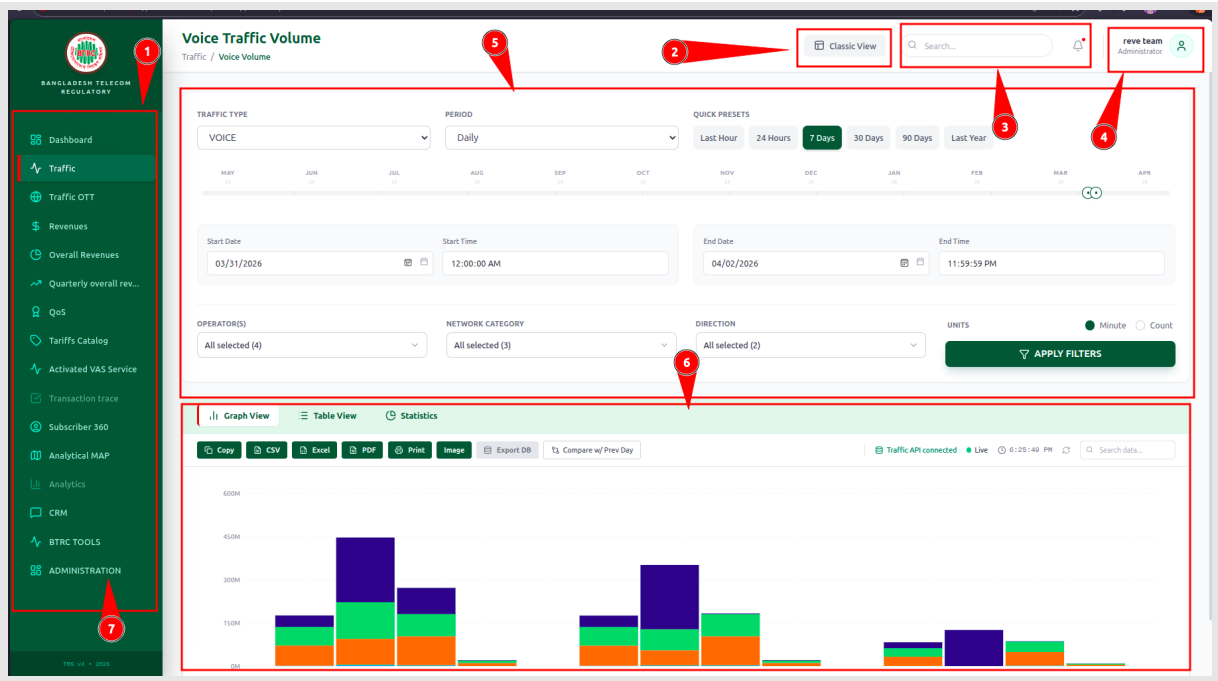


Figure 2: Classic View Overview

- **Menu Bar (Pointer 1)**: This is the main navigation panel on the left-hand side of the website. It allows users to access various sections like Dashboard, Traffic, Revenues, QoS, Tariffs Catalog, and others.
- **Classic and Modern View Switch Button (Pointer 2)**: This button allows the user to switch between the classic and modern view of the website. The user can toggle between these views to get a different perspective or user interface.
- **Search on this Page (Pointer 3)**: The search bar enables users to quickly search for specific data or reports on the page.
- **Profile of User (Pointer 4)**: This section displays the logged-in user's profile. It shows their name, role (Administrator or other), and other personal details. Users can access settings and log out from this section.
- **Custom Search (Pointer 5)**: This allows users to apply specific filters or search criteria. It includes options like time range, operators, network categories, and direction for traffic data. Users can enter custom search queries to view the relevant data.
- **User Custom Search Results (Pointer 6)**: Once the filters are applied, the results are displayed here. The data is shown in a graphical format (bar charts, etc.) depending on the selected filters.

- **Administration Section (Pointer 7)**: This section is only visible to users with administrative privileges. Non-admin users will not have access to this section.

3.2 Classic View Description

The classic view offers a detailed and comprehensive presentation of traffic data. Key elements in this view include:

- **Traffic Data Visualization**: The website displays traffic volume data in a graphical format (e.g., bar charts), with different traffic types and filters applied.
- **Traffic Customization**: Users can filter traffic data by selecting different options such as period, network category, direction, and more.
- **Export Options**: Users have options to export the displayed data in various formats (CSV, Excel, PDF, etc.) for further analysis or reporting.
- **Live Connection Status**: The live connection status (e.g., ”Traffic API connected”) is shown, which indicates whether the system is receiving real-time traffic data.

Note: This section may change once the modern view is shared, but for now, the classic view offers a simple, intuitive interface for monitoring and managing telecom traffic.
